No individual citation nor obvious combination of citations discloses a method for assessing a functional size of a software application including the steps of analysing a software requirements specification and determining zero or more keywords for each requirement, using a computer to cross-reference the keywords with a stored lexicon including a function type and complexity for each keyword, and further using the computer to associate each keyword with an entry in the lexicon thus obtaining a function type and complexity for each keyword, using a functional sizing standard to deduce a number of function points for the function type and complexity of each keyword, and combining the function points to obtain a functional size of the software application.
